

Immersion and jacket tubes (tube systems)

Immersion and jacket tubes protect low pressure and medium pressure lamps from aggressive media and moisture. The applied high quality quartz material also extends maintenance and cleaning cycles.

For this reason, **UV SYSTEC GmbH** supports its customers with high-quality quartz tubes and immersion tube systems.

Due to the regional and business proximity to well-known manufacturers of quartz glass tubes our experienced technicians will find and provide an individual solution for almost every request.

Possible applications:

- drinking water
- ballast water
- waste water
- process water
- swimming pools
- industrial emission
- surface disinfection
- odour elimination
- photochemistry
- TOC analysis

We offer you:

- ozone-free and ozone-generating quartz material
- Quartz tubes in different purity levels / doping
- in almost every diameter
- open on one or both sides
- immersion systems with stainless steel or plastic head
